TECHNICAL SKILLS

Mobile: Flutter, Dart, Clean Architecture, MVVM, Riverpod, Provider, GetIt, Retrofit, .NET MAUI, C#

Backend: NestJS, Node.js, TypeScript, PostgreSQL, MySQL, Drizzle ORM, REST APIs, JWT, Redis

Integrations: REST APIs (Retrofit + Dio), PayMongo, Facebook Graph API, WebSocket/Socket.IO, Firebase, OpenStreetMap

Tools: GitHub Actions (CI/CD), Firebase App Distribution, Git/GitHub, Postman, Android Studio, Xcode, VSCode

EXPERIENCE

IT Specialist – Mobile & Desktop Developer

LCC Group of Companies | *July 2026 – Present*

- Maintain and optimize enterprise Android and desktop applications (.NET MAUI, C#) supporting 100+ daily operational staff across 10+ warehouse and retail locations.
- Engineered an offline-first SQLite caching layer that resolved race conditions and eliminated live data loss during high-traffic warehouse floor updates, cutting sync failures by roughly 97%.
- Integrated custom hardware barcode scanning routines and automated test suites, eliminating data validation failures during inventory intake and reducing intake time per shipment.

Software Developer Intern (OJT)

Quanby Solutions, Inc. | *Payroll Management System* | *Feb – May 2026*

- Led backend development on a NestJS payroll system, establishing architectural standards and reviewing pull requests across a team of 3 engineers.
- Architected and shipped 11 full-stack modules (NestJS, PostgreSQL, Next.js) covering authentication, attendance, overtime calculation, and payroll processing.
- Implemented role-based access control (RBAC), audit logging, session timeouts, and end-to-end integration tests to safeguard financial workflows.

PROJECTS

MyNagAlaga: Government Services Platform

Mobile Developer

Grand Winner *– 1st Naga City Mayoral Hackathon, Social Services Challenge | 2026*

- Engineered the citizen-facing mobile application using Clean Architecture and Riverpod, ensuring high maintainability, consistent code standards, and reliable state management.
- Integrated a secure, multi-purpose Digital Badge module, accelerating identity validation for aid distribution (ayuda) and civic services to drive 3x faster case resolution for municipal staff.
- Developed interactive OpenStreetMap (OSM) routing features, delivering proximity-based, real-time evacuation navigation for citizens during disaster emergencies.

ElecXus: Electric Service Management System

Full Stack Developer | Capstone Project | Aug – Nov 2025

- Engineered a self-service utility application with automated billing, geospatial complaint logging, and live outage tracking via Facebook Graph API, earning a 4.62/5.0 UAT rating and a 98% post-launch adoption rate.
- Integrated PayMongo payment gateway (e-wallets, cards) with webhook-driven reconciliation for instant transaction confirmation.
- Delivered real-time status pipelines using Socket.IO and Firebase Cloud Messaging (FCM) for push alerts, providing end-to-end transparency across high-volume issue resolution workflows.

EatEase: Food Ordering Mobile Application

Full Stack Developer | Jan – Mar 2025

- Built a cross-platform Flutter food ordering application featuring live order tracking, real-time customer-vendor WebSocket chat, and digital checkout.
- Architected the MongoDB schema and Node.js REST API layer managing order lifecycles, vendor menus, and payment reconciliation.

EDUCATION

Bachelor of Science in Information Technology – Cum Laude

Bicol University College of Science, Legazpi | 2022 – 2026
