TECHNICAL SKILLS

Mobile: Flutter, Dart, Android, iOS, Kotlin, Jetpack Compose, Riverpod, Hilt, SQLite, Clean Architecture, MVVM

Backend: NestJS, Node.js, Express, TypeScript, PostgreSQL, MySQL, MongoDB, Drizzle ORM, REST APIs, JWT

Web & Integrations: React, Next.js, Firebase, FCM, WebSockets, Socket.IO, PayMongo, Facebook Graph API, OpenStreetMap

DevOps: Git, GitHub Actions, CI/CD, Ubuntu Server, Firebase App Distribution

EXPERIENCE

Mobile & Full-Stack Developer

LCC Group of Companies | *Jul 2026 - Present*

- Contributed to modernizing legacy Warehouse Management System (WMS) workflows by building native Android (Kotlin, Jetpack Compose) and web modules.
- Built a GitHub Actions CI/CD pipeline for Android builds, signing, and over-the-air (OTA) distribution to retail kiosks via Server-Sent Events, eliminating manual APK deployments.
- Engineered an offline-first SQLite data layer for apps used by 100+ daily staff across 10+ retail locations with intermittent connectivity.
- Engineered a multi-tier price verification and promo display system spanning a Kotlin kiosk app, NestJS backend, and React admin dashboard.

Freelance Mobile & Full-Stack Developer (Part-Time)

POS System (Project-Based) | *Jun 2026 - Oct 2026*

- Designed and delivered an on-premises POS system for a retail business as sole developer, from system design to local server provisioning.
- Built a cross-platform Flutter app for Windows registers and Android tablets, backed by a NestJS REST API with Jest E2E tests on self-hosted Ubuntu servers.
- Built an in-house distribution portal for installing Android and Windows builds via QR code, integrated with automated CI/CD releases.
- Administered the self-hosted Ubuntu Server environment, handling deployments, server configuration, and maintenance.

Software Developer Intern

Quanby Solutions, Inc. | *Feb 2026 - May 2026*

- Owned backend development for an enterprise web platform built with Next.js, NestJS, and PostgreSQL, leading code reviews in a 3-person team.
- Shipped 11 full-stack production modules covering authentication, workflow automation, business logic calculations, and reporting.
- Implemented RBAC, session timeouts, audit logging, and Jest/Supertest integration test suites.

PROJECTS

MyNagAlaga: Government Services Mobile Platform

Lead Mobile Developer | ***Grand Winner**, 1st Naga City Mayoral Hackathon (Social Services Challenge)* | *2026*

- Built a citizen-facing Flutter app (Clean Architecture, Riverpod) with a Digital Badge for identity validation in municipal aid distribution.
- Integrated OpenStreetMap proximity routing for offline and online navigation to the nearest evacuation centers.

outbox: Offline Mutation Queue for Flutter

Open Source Package | *Dart, SQLite* | *github.com/jDxve/outbox*

- Published a durable, SQLite-backed offline mutation queue with per-group ordering, exponential backoff, idempotent retries, and dead-letter queues.
- Designed a client-agnostic architecture with pluggable storage and transport adapters (Dio, http, Retrofit, GraphQL, raw sockets).

ElecXus: Electric Service Management System

Full-Stack Developer, Capstone | *Aug 2025 - Nov 2025*

- Built a utility service platform for Albay Electric Cooperative (ALECO) using Flutter, Express, and MySQL, with automated billing, PayMongo payment reconciliation, real-time updates via Socket.IO and FCM, and automated outage posts via Facebook Graph API. Rated 4.62/5.0 in user acceptance testing (UAT).

EatEase: Multi-Vendor Food Ordering Platform

Full-Stack Developer | *Jan 2025 - Mar 2025*

- Built a food delivery app (Flutter, Node.js, MongoDB) with live order tracking, PayMongo payments, and real-time WebSocket chat between customers and vendors.

EDUCATION

BS Information Technology, Cum Laude

Bicol University College of Science, Legazpi City | *Graduated June 2026*
